

**APPLIED REMOTE SENSING
FRWS 5750/6750
FALL 2006**

GRADING POLICY

Grading will be based on class and lab assignments:

- Weekly **lab assignments** will be given during the lab period and are due the following week unless I say otherwise. These assignments are worth 50 points. Grading will be for completeness, accuracy, and neatness.
- **In-class assignments** will be given intermittently throughout the semester. The timing of these assignments will be somewhat random and will be worth 10 points each. These are due by the next class period unless I say otherwise.
- A **final project** will be due on the last regular day of class. The topic of your project will be of your own choosing but must be cleared with me. This project is worth 200 points.
- Each class or lab assignment will be turned in electronically (e-mail) on/or before class or lab on the due date. Late lab assignments will be assessed a 5-point fee for every day they are late. In class assignments will lose 1 point per day they are late. The final project will not be accepted late.
- I will grade your assignments based on content, accuracy, clarity of writing, organization, and neatness.

World Wide Web Rules:

A portion of the work in this class will involve the use of the World Wide Web (WWW). The web provides a significant source of data and information on the use and application of remote sensing imagery. You are encouraged to use the web as much as possible to gather information and to assist you in your laboratory exercises and final project.

However, there are basic rules of usage that I will expect you to follow.

The **first rule** is that any material of significant content (i.e. anything other than basic screen icons) has to be properly cited. A proper citation will include the author of the source page and the URL of that page.

Second, all of your documentation must be your own work! Copying text from other sources will be considered plagiarism. **Plagiarism will not be tolerated.** The penalty for plagiarism and/or cheating will follow the **USU Academic Policies and Procedures Manual** (<http://www.usu.edu/policies/pdf/Acad-Integrity.pdf>). Copying data, graphs, images, and figures from other documents is permissible as long as these items are properly cited. The interpretation of these data, graphs, images, and figures must be your own work.
